

WORKSHOP 7

Laerdal
helping save lives

SIMX

Virtual reality medical simulation training for military

Virtual Patient Simulation Training is a flexible, effective and efficient training method for clinical reasoning, collaboration and critical thinking.

The SimX simulation platform is being actively used by the US Air Force and other US and international Defense Medical training organizations.

The SimX "VALOR" library contains dozens of training scenarios covering a wide range of subjects including TCCC, Advanced Resuscitative Care and En Route Care aligning with NATO standards. During the workshop you will be given hands-on experience in teamwork to treat virtual patients.

The workshop also gives you an opportunity to discuss with the SimX team and the Laerdal team about a pilot implementation in your organization.

Oct 16th
14:30 – 16:00
Room 001
